

An economical, flexible and extendable line alarm system that provides protection for display merchandise.

Keys

At the heart of the Showsafe System are the keys. These keys provide unmatched security integrity not found in any other line alarm system.

Each key has its own personalized serial number that makes it easy to trace and register. The keys are easy for store personnel to use and provide quick alarming deactivation. The Memo Key can store system data information.

Keys are used to manage the Showsafe system and reset alarms.

User Key – Operator key for sales personnel. Its unique serial number makes each key action traceable to its corresponding key and serial number. Can only be used in one store department.

Revisions Key – Master key for store management and auditing personnel. Its unique serial number makes each key action traceable to its corresponding key and serial number. Can be used across multiple store departments.

Program Key – Programming key for store management and auditing personnel. For rapid change of key codes in the event of key loss or changes in operating parameters, simply plug into the VSM (Master Unit) and the new parameters will be programmed within a few seconds.

Memo Key – Service key for store management and auditing personnel. Use this key to get a read-out of stored master unit data, including all alarms, system operations and system messages with date and time. This can be used for analysis in cases of suspected internal theft, application errors and service operations.

Infra Red Remote Control – Used to switch off the acoustic alarm signal temporarily. After having reset the sound three times with the RC, the alarm can ultimately only be reset with a key.

Keys
